

## Technical Data Sheet

**Product:**

Bed Bug Monitor

**Code:**

CAT-BBM-144

## Description

Monitors are sold as units made of clear plastic and contain a glue surface inside made with long lasting dry touch glue to trap the bed bugs. Incorporated within the glue is an aggregation semio-chemical bed bug attractant that mimics the scent of human skin and draws the insect to the monitor.

**Active ingredient:** Semio-chemicals.

**Inert ingredient:** Plastic top and bottom.

## Application

Remove from wrapping and place 4 monitors in the corners of each bed between the mattress and box spring.

## Storage

When the monitors are stored in their plastic wrap the shelf life is 2 years (the monitors need to be contained in the plastic wrap to prevent the attractant from evaporating).

Refrigeration will extend shelf life, however this should not be required as the 2 year shelf life is based on storage in an un-cooled warehouse during the Summer months where temperatures get up to 100°F. Once removed from the plastic wrap the active life is 6 months.

## Precautions

Safe for use around pets if used as directed.
