Environmental Health

# Guanaway

**Concentrate**

**Heavy Duty alkaline  
cleaner disinfectant**

Ideal for use to control micro-organisms associated with the clean up of bird waste. Cleaning operators run the risk of inhaling micro-organisms associated with bird areas. e.g. psittacosis, histoplasmosis, salmonellosis, e-coli and other serious diseases.

Passes BS6471 against e-coli

**Dilution rate: 1-125**

By treating before, during and after with Guanaway Concentrate the risk in areas where birds are known to have been present is greatly reduced. Guanaway Concentrate is a powerful alkaline cleaner/degreaser which neutralises the acidic by products associated with bird droppings. This reduces the corrosion to the stone work and increases safety by removing the slippery greasing waste
