

Oa2ki

Pesticide Free Flying & Crawling Insect Killer Concentrate

Oa2ki is effective in controlling a wide range of insects at all growth stages including larvae, pupae and eggs

Oa2ki due to its physical mode of action is effective against insect strains that are resistant to organo-phosphate and pyrethroid insecticides.

Oa2ki once diluted, may be applied in domestic, commercial, public and institutional premises, including kitchens and food preparation/manufacturing areas. In hospitals (including corridors and occupied wards). On board ships and in shipping containers. In animal livestock houses. On refuse tips as well as in the home or garden.

Use in Public Health: Effective in controlling most types of common flying & crawling insects, including ants, fleas, cockroaches, flies, mosquitoes, moths and bed bugs etc.

Amenity: Effective in controlling brown tail moth, (seek local authority permission before use. Oa2ki may in the short term score foliage and therefore effect appearance of vegetation).

Use in Agricultural Situations: Effective in controlling poultry mite, stored product insects including grain pests, litter beetle, flying insects such as: house fly, cluster fly, mosquitoes, etc. (can be applied as surface spray while livestock is present but avoid direct contact with livestock/animals).

Directions for use: Dilute concentrate by adding to clean tap water at a rate of 1 part concentrate to 9 parts water. Shake well. 500ml concentrate makes 5 litres of ready to use product.

Crawling Insects: Apply as a fine to medium spray at low pressure, direct onto insects or surface/areas they may frequent or use to enter premises. For fairly clean non-absorbent surfaces, apply 2 ltrs of diluted product per 100m². For dirtier and heavier infestations use the special rate of 5ltrs of diluted product per 100m².

Flying Insects: Apply with a suitable ULV aerosol generator or mist/thermal fogging machine. Apply approximately 1 ltr of diluted product per 1500m².

Caution: Do not spray directly onto foodstuffs, plants, animals or pets. For application direct to insects or areas/surfaces they frequent only.

Do not direct spray/mist into the eyes or onto broken skin.

Spray may mark or darken some absorbent materials or surfaces. These marks normally disappear within a few days. Protect any sensitive areas. Spray a small test area first.

Oa2ki may effect the appearance and possibly damage polished or waxed surfaces. Cover any sensitive areas/surfaces before application. Spray a small area first.
