# Permost Uni Fly Spray

A PROFESSIONAL READY TO USE INSECTICIDE

# PERMOST UNI FLY SPRAY

Permost Uni Fly Spray is a professional insecticide for effective control against flying and crawling insects. The ready to use formulation allows ease of use without the need for dilution.

Permost Uni Fly Spray can be applied in domestic situations including hospitals (excluding occupied wards), in and around military barracks, farm buildings, bulk milk rooms, dairies and milking parlours.

Permost Uni Fly Spray can also be used in animal and avian housing, ant and wasp nests and refuse tips.

## Target Pests:

Permost Uni Fly Spray is effective at controlling a range of target pests including:

- Flies
- Mosquitoes
- Wasps
- Ants
- Cockroaches
- Earwigs
- Bristletails
- Fleas
- Beetles
- Mites
- Ticks
- Lice

## Key Features:

- Ready to use formulation.
- Rapid knockdown effect.
- Ideal for use in domestic situations.
- Easy to use as a space spray, surface spray and direct spray.
- Applied to hard porous and non-porous surfaces.

# PERMOST UNI FLY SPRAY

## Active Ingredient:

Permost Uni Fly Spray combines two actives to give effective control of target pests.

**Tetramethrin:** Acts on the nervous system of insects by disturbing the function of neurons through the modulation of the sodium channel. This results in hyperactivity of the nervous system and death.

**Permethrin:** Is the killing agent in this formulation. The active acts on the nervous system of insects. It interferes with the sodium channels to disrupt the function of neurons, causing muscles to spasm, culminating in paralysis and death.

## Application Methods:

Permost Uni Fly Spray can be applied in various ways to control flying and crawling insects.

### Space treatment and fogging:

Permost Uni Fly Spray should be applied through a hand sprayer or a fan assisted rotary atomiser as a fine mist. Alternatively the product can be applied through a fogging machine.

Apply 1 ml of product to 1 cubic metre. One litre is sufficient to treat 1000 cubic metres.

### Surface spraying:

Permost Uni Fly Spray should be applied through a hand sprayer or boom and nozzle sprayer apparatus as a medium or coarse spray.

Apply 10 ml of product per square metre. One litre is sufficient to treat 100 square metres.
