

Goodbye to flies!

REDTOP FLY TRAP

Bait is especially appealing to female flies - so reducing the next generation.

Simply hang the fly trap away from the area you wish to protect.

Low cost, foolproof, disposable.

Up to 20,000 flies per trap.

Environmentally friendly and food-safe

the best thing since...

flies bred!

Problem with Flies...?

1. Prepare Trap

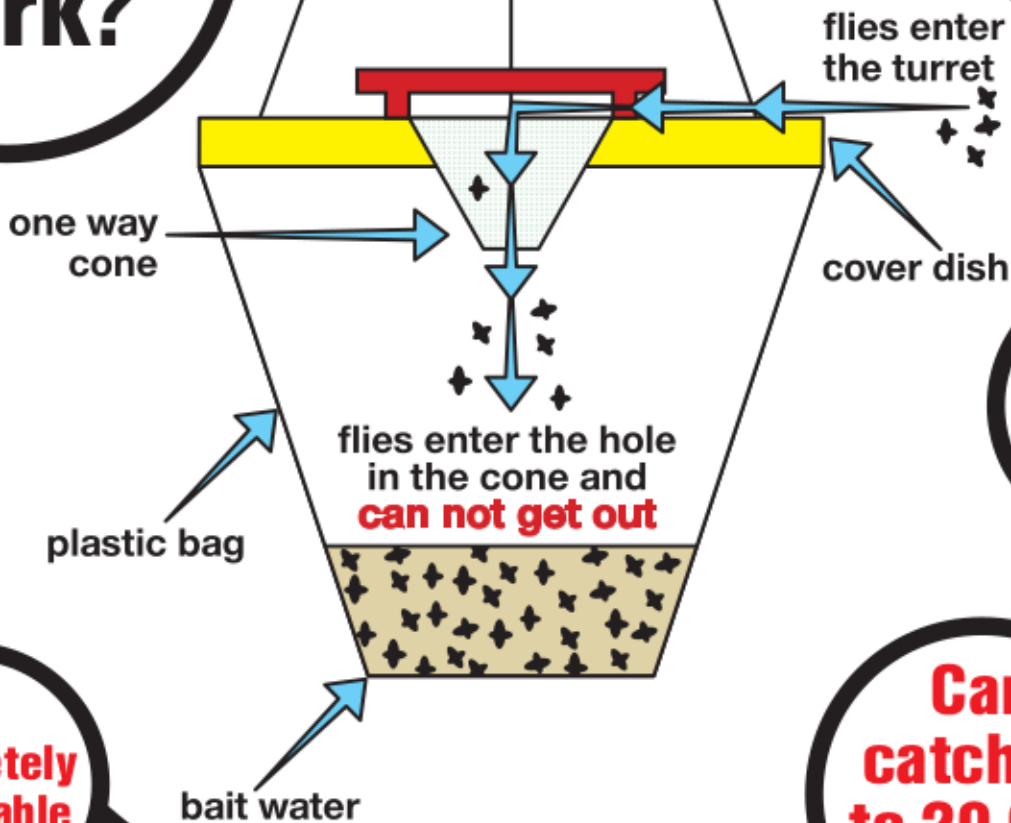

2. Add Water

...problem solved!

How does it work?

**Low cost
& easy to
use**

**Can
catch up
to 20,000
flies**

**Completely
disposable**

PLEASE NOTE

1. The RED TOP needs UV to work and should be hung in direct sunlight.
2. The warmer the weather, the faster the catch (and obviously, the more flies there are to catch!)
3. The RED TOP **should not** be hung inside a building - it is designed to **attract the flies out of the building**.
4. Depending on the scale of the problem, the RED TOP can be filled to capacity (20, 000 flies!) in as little as 3 days - or it can be catching flies after 12 weeks! (The trap on the front of this leaflet was sited in a suburban garden **'without' a fly problem!!**)
