

TECHNICAL SPECIFICATION

Solar Panel Mesh - Galvanised Steel and Black PVC Coated

SKU: WM170-R

Product Description

A durable, corrosion-resistant mesh designed to prevent pigeons and other birds from nesting beneath solar panels. The mesh creates a physical barrier without drilling into panels or affecting system performance. Suitable for residential and commercial installations.

Key Features

- Galvanised steel wire for long-term strength and corrosion resistance. UV-resistant black PVC coating for enhanced outdoor durability.
- Prevents birds, nesting materials, and debris from entering beneath solar panels.
- Maintains airflow and system efficiency by keeping the underside clear.
- Discreet black finish blends with modern solar arrays.
- Compatible with non-invasive solar mesh clips for fast installation.
- Suitable for pitched and flat roof solar systems.

Performance & Benefits

- **Corrosion resistance:** Galvanised steel core withstands weathering and moisture.
- **UV stability:** PVC coating prevents degradation from sunlight.
- **System protection:** Helps maintain airflow, prevents debris buildup, and reduces fire risk.
- **Efficiency retention:** Keeps wiring and components clear of nesting materials.
- **Low maintenance:** Once installed, requires minimal ongoing attention.
- **Humane solution:** Blocks access without harming birds.
